## State Water Plan - Cedar/Beaver Basin

### Foreword

A *State Water Plan* was distributed in early 1990 to provide the foundation for establishment of state water policy. Within the framework of water policy planning, the state meets its obligation to plan and implement programs to best serve the needs of the people.

In addition to the *State Water Plan*, more detailed plans are being prepared for each of the 11 river basins. The Cedar/Beaver Basin is one of these. This plan discusses water and water-related problems, needs, demands and alternatives for potential conservation and development measures. Final selection of alternatives will rest with local decision makers.

Like the *State Water Plan*, this basin plan is designed to be flexible. There is always a need for continuous re-evaluation so adjustments can be made to reflect changing situations. Planning needs the active participation of all concerned entities and individuals and their responses to issues. The success of this planning process is enhanced through public involvement, resulting in broader support to implement recommendations. In addition, there is a greater need for coordination at all levels of government. Progress is more difficult when some are trying to go their separate way. This basin plan is intended to help bring about greater coordination between those involved to assure the needs and demands of the local people are met.

  
Larry S. Ross, Chair

  
Dr. M. Karlynn Hinman, Vice Chair

O. Eugene Johansen

### Acknowledgement

The Board of Water Resources gratefully acknowledges the dedicated efforts of the State Water Plan Steering Committee and Coordinating Committee in preparing the *Cedar/Beaver Basin Plan*. This work was spearheaded by the planning staff of the Division of Water Resources. Valuable assistance was provided by individual coordinating committee members and their associates representing state agencies with water related missions. Their high standards of professionalism and dedication to improving Utah's natural resources are essential to this basin plan. Representatives of state and federal cooperating entities, the statewide local advisory group and the basin planning advisory group brought expertise from a broad spectrum of Utah's population. Representatives of many local entities and groups provided much needed assistance at the "grass-roots" level. We appreciate their input and assistance.

In endorsing this plan, as was the case with the *January 1990 State Water Plan*, we reserve the right to consider individual water projects on their own merits. This basin plan is an important guide for water development in the Cedar/Beaver Basin.
